

Templates for the Three Solids of the Cube Puzzle

Instructions:

1. Print the templates on cardstock or thick paper for easy construction.
2. Cut out the templates along the outlines.
3. Fold consistently, leaving lines inside or outside for all three solids, and tape them around.
4. To build a cube from six little pyramids. Three of them should be folded in the opposite direction. In other words, three should be folded such that the lines are outside, while the other three are folded with the lines inside.
