# $36^{\text {th }}$ International Mathematical Olympiad 

First Day - Toronto - July 19, 1995
Time Limit: $4 \frac{1}{2}$ hours

1. Let $A, B, C, D$ be four distinct points on a line, in that order. The circles with diameters $A C$ and $B D$ intersect at $X$ and $Y$. The line $X Y$ meets $B C$ at $Z$. Let $P$ be a point on the line $X Y$ other than $Z$. The line $C P$ intersects the circle with diameter $A C$ at $C$ and $M$, and the line $B P$ intersects the circle with diameter $B D$ at $B$ and $N$. Prove that the lines $A M, D N, X Y$ are concurrent.
2. Let $a, b, c$ be positive real numbers such that $a b c=1$. Prove that

$$
\frac{1}{a^{3}(b+c)}+\frac{1}{b^{3}(c+a)}+\frac{1}{c^{3}(a+b)} \geq \frac{3}{2} .
$$

3. Determine all integers $n>3$ for which there exist $n$ points $A_{1}, \ldots, A_{n}$ in the plane, no three collinear, and real numbers $r_{1}, \ldots, r_{n}$ such that for $1 \leq i<j<k \leq n$, the area of $\triangle A_{i} A_{j} A_{k}$ is $r_{i}+r_{j}+r_{k}$.

## $36^{\text {th }}$ International Mathematical Olympiad

## Second Day - Toronto - July 20, 1995 <br> Time Limit: $4 \frac{1}{2}$ hours

4. Find the maximum value of $x_{0}$ for which there exists a sequence $x_{0}, x_{1} \ldots, x_{1995}$ of positive reals with $x_{0}=x_{1995}$, such that for $i=1, \ldots, 1995$,

$$
x_{i-1}+\frac{2}{x_{i-1}}=2 x_{i}+\frac{1}{x_{i}} .
$$

5. Let $A B C D E F$ be a convex hexagon with $A B=B C=C D$ and $D E=E F=F A$, such that $\angle B C D=\angle E F A=\pi / 3$. Suppose $G$ and $H$ are points in the interior of the hexagon such that $\angle A G B=\angle D H E=2 \pi / 3$. Prove that $A G+G B+G H+D H+H E \geq$ $C F$.
6. Let $p$ be an odd prime number. How many $p$-element subsets $A$ of $\{1,2, \ldots 2 p\}$ are there, the sum of whose elements is divisible by $p$ ?
