Looking for a semester long project to enhance student learning? We have one for you!

We would like to introduce a semester long Introductory Statistics project that can be used in the traditional classroom, hybrid course or online. The project is broken up into four phases and any statistical software can be used. We plan to discuss the statcrunch program that is web based and ideal for connecting online students together. This project has been used with Undergraduate and Graduate students. (Received September 22, 2010)
