The American Statistical Association's Undergraduate Statistics Education Initiative (USEI).

In the spring and summer of 2000, the Undergraduate Statistics Education Initiative (USEI) brought together statistics educators and representatives of businesses and industries who hire statisticians to develop curriculum guidelines for undergraduate statistics majors, concentrations, and minors. These guidelines identify important topics and skills while allowing considerable flexibility for colleges and universities to develop programs to suit their individual needs. A summary of the guidelines will be presented. More detailed information is available at www.amstat.org/education/usei.html. (Received September 15, 2000)
